

CURRICULUM VITAE

PROF CLAUDIO SANTI

- ACADEMIC CURRICULUM VITAE**
- LIST OF PUBLICATIONS**
- LIST OF SELECTED INVITATED TALKS**
- LIST OF PROJECT SUPPORTED BY THIRD-PARTY FUNDS**
- ACADEMIC TEACHING & LIST OF SUPERVISED PHD THESIS**

ACADEMIC CV	
Personal Data	
Name	Claudio Santi
Address	Dept. Pharmaceutical Sciences University of Perugia – Via del Liceo 1 Perugia 06164 ITA
Phone	+39 075 5855102 (office) +39 3489515617 (mobile)
e-Mail	claudio.santi@unipg.it
Date of birth	16-07-1967
	<i>married</i>
Education	
05/1998 – 09/1998	Postdoctoral studies with Prof. Thomas Wirth at the University of Basel Research-topics: Synthesis of enantiomerically pure diselenides and their application in asymmetric synthesis.
02/1996	Doctoral degree with Prof. Marcello Tiecco at the University of Perugia Thesis title: “New Synthetic Methodologies in Organic Chemistry: Conversion of functional groups catalyzed or promoted by organoselenium reagents
11/1992-11/1995	Doctoral studies in the Prof. Marcello Tiecco research group at the University of Perugia. Research-topics: -New synthetic methodologies for the synthesis of heterocyclic compounds: <ul style="list-style-type: none"> • Stereoselective Synthesis of substituted tetrahydrofuranes • Cyclofunctionalization of O-allyl-oximes • Cyclofunctionalization of alkenyl immines • Cyclofunctionalization of alkenyl oxaziridines - New catalytic reactions: one pot selenenylation deselenenylation reactions: <ul style="list-style-type: none"> • Synthesis of 2,5-dihydrofuranes • Synthesis of Butenolides
07/1990 -07/1992	Degree in <i>Chemistry and Drugs Technology</i> at the University of Perugia - thesis work in Organic Synthesis, supervisor Prof. Marcello Tiecco: “Cyclofunctionalization Reaction promoted by Electrophilic Reagents: Catalytic selenenylation-deselenenylation Reaction”
Employments and Positions	
12/2013	National Scientific Habilitation as Full Professor
10/2013-present	Associate Professor Dept Pharmaceutical Sciences, University of Perugia
03/2013 – 05/2013	Visiting Professor of Organic Chemistry , University Jan Dlugosz in Czestokowa (PL) (70hr)
01/2012 – present	Member of Bioethics Committee , University of Perugia

01/2009 – present	Coordinator of Erasmus Agreements School of Chemistry Cardiff University (since 2009) Jan Dlugosz University in Czestochowa (since 2012) University of Wroclaw (PL) (since 2014)
01/2009 – present	Member of the Panel for the evaluation of Erasmus and Erasmus Placement fellowships , Faculty of Pharmacy and Dept. Pharmaceutical Sciences, University of Perugia
01/2009 – present	Coordinator of Nuclear Magnetic Resonance Service , University of Perugia
01/2005 –09/2013	Aggregate Professor Dept. Chemistry and Technology of Drugs, University of Perugia
11/2010	Habilitation as associated professor
06/2009 (2 weeks)	Visiting Professor of Organic Chemistry School of Chemistry Cardiff University – UK (LLP-Erasmus Program)
06/2007 (1 week)	Visiting Professor of Organic Chemistry School of Pharmacy Jagellonian University Krakow –PL (LLP-Erasmus Program)
01/2002 – 01/2005	Assistant Professor Dept. Chemistry and Technology of Drugs, University of Perugia
10/1998 – 01/2002 11/1996 – 04/1998	Research Assistant (<i>in different level of technical position</i>) Dept. Chemistry and Technology of Drugs, University of Perugia
Awards	
04/2012	Best Poster Award “Environmental & Green Chemistry” , and RCS Advances Poster Prize (RCS Publishing) at 12th Eurasia Conference on Chemical Sciences (Corfù 16-21 April 2012)
09/2007	Tetrahedron Asymmetry: Most Cited Paper 2004-2007
09/2001	Award of Merit , Second European Catalysis Symposium – Pisa ITALY
04/1998	Research Fellowship , Swiss National Fundation Basel
Teaching experiences	
2014 - present	Professor of Organic Chemistry of Natural Compounds 42 hr/year (6 CFU) at school of Pharmacy University of Perugia
2001 - present	Professor of “Physical Methods for Organic Chemistry” 72hr/year (9CFU) at the school of Medicinal Chemistry University of Perugia
2003 - 2011	Professor of “Spectroscopic Methods for Biomolecules” 32hr/year (4CFU) at the school of Biotechnology University of Perugia
2006 - 2011	Professor of “Advanced Spectroscopic Methods” 24hr/year (3CFU) at the school of Biotechnology University of Perugia

2006 - present	Professor of “NMR for Organic Structures Elucidation” PhD course of Medicinal Chemistry, University of Perugia
1996 - 2001	Assistant of “Physical Methods for Organic Chemistry” ; “Organic Chemistry 1” and “Organic Chemistry 2”
2006 - present	Supervisor and co-advisor of more than 50 experimental diploma work thesis, 2 incoming and 6 outgoing Erasmus Students, Lab-supervisor of 1 PhD student Advisor/coadvisor of 3 PhD thesis Supervisor of 3 post doc student. C-advisor of 3 PhD Sandwich from Brasil
Boards Committee and Editorial Collaborations	
2013 - present	Regional Editor of Recent Patents on Catalysis (Bentham)
2012 - 2013	member of the Editorial Board for Journal of Chemistry and Chemical Engineering (David Publishing Company – USA)
2012 - present	member of the Editorial Board for Current Green Chemistry (Bentham)
2012 - present	member of the Editorial Board for Recent Patents on Catalysis (Bentham)
2011 - present	member of the Scientific Committee for electronic conference on Synthetic Organic Chemistry (ECSOC-15) (ECSOC-16) (ECSOC-17) <u>edited by MDPI (Molecules)</u>
2010 - present	member of the Editorial Board for Current Chemical Research (Metha Press)
2014	Member of the scientific committee at 1st International Meeting of Molecular Chemistry, Chemometrics and applications (RICMCA-2014) 29-30 May 2014 Bèni Mellal Maroc
2010	Chairman for 1th electronic symposium on Selenium Chemistry (ESeS-1)
2008	member of the Organizing Committee of Co.Gi.Co. -Perugia
2002	member of the Organizing Committee of Italian Spanish Symposium - Perugia

LIST OF PUBLICATIONS

H-index = 23 (based on ISI Web and Scopus)

Peer Reviewed, Books and Chapters

1. **“Organoselenium Chemistry Between Synthesis and Biochemistry”** Ed. C. Santi - Bentham eBooks (2014) eISBN: 978-1-60805-838-9, 2014 ; ISBN: 978-1-60805-839-6

Organochalcogen Chemistry

- Stereoselective and Asymmetric Synthesis
- Catalysis (oxidation, cyclofunctionalization)
- Synthesis and synthetic applications of the complexes PhSeZn-Halides and ArSZn-Halides as the first class of bench stable chalcogenates.
- Synthesis of small organoselenium compounds with Antiviral, Antimicrobial, and antioxidant activity
- Green Chemistry

Future plans

- Synthesis of new chalcogen based heterogeneous catalysts for application in flow chemistry. (*Project accepted for a grant of a local Foundation*)
- Elucidation of the chemical mechanism played by Selenium, Selenoproteins and zinc-finger proteins in vascular disorders and repair. (*Proposal submitted to Human Frontiers Science Program by a team composed by C. Santi [PI-Univ. Perugia], C. Schiesser [Univ. Melbourne], M. Iwaoka [Univ. Tokay], E. Lenardao [Univ. Pelotas]*)
- Synthesis of selenopeptides for the treatment of vascular disorders and repair. (*Proposal submitted for a grant of IRRTF, University of Melbourne*)

- Short overview -

Over the last thirteen years, many important chemical transformations were efficiently achieved using organoselenium intermediates. These reactions are realized using mild conditions and are, usually, characterized by high chemio regio and stereoselectivity.

My early researches focused on the use of electrophilic selenium reagents in stereoselective functionalization and cyclofunctionalization reactions. We demonstrated that in the presence of a stoichiometric oxidant selenium act as catalyst in "one-pot" selenenylation deselenenylation processes (*J. Chem. Soc. Chem. Commun.*, 1993, 637).

The synthesis of some new optically pure diselenides as precursors of selenenylating reagents allowed the synthesis of enantiomerically enriched functionalized compounds and/or heterocycles (*Chem. Eur J.* **2002**, *8*, 1118 and *Angew. Chem. Int. Ed.* 2003, *42*, 3131) and we demonstrated the possibility to perform the non-enzymatic kinetic resolutions of allylic alcohols (*Organic Letters* 2004, *6*(25), 4751).

Currently my research can be divided in 3 main topics:

- **Synthesis and synthetic applications of new zinc chalcogenates for reaction in non-conventional medium.** We know that the active species in the catalytic task of GPx is a selenolate stabilized by hydrogen bound in a catalytic triade. During our efforts on reproducing a synthetically useful selenolate we described the preparation of the first class of bench stable selenium centered nucleophile reagents (PhSeZnCl, PhSeZnBr). The reaction is a simple oxidative insertion of elemental zinc into commercially available PhSeCl PhSeBr. These reagent are good selenenylating agents and were successfully employed in several reactions such as: the ring opening of epoxides, the nucleophilic substitution of aliphatic, acyl, vinyl and aromatic halides, the Michael type addition reactions, observing in all the cases an interesting rate acceleration in "on water" conditions. (*Eur. J. Org. Chem.* **2008**, *32*, 5387; *Eur. J. Org. Chem.* **2009**, 4921; *Eur. J. Org. Chem.* **2011**, 1048-1051; *eEROS* **2011**, *Green Chemistry* **2012**, *14*, 1277-1280)

In consideration of the similarity with the physiological selenium atom present in the catalytic center of the glutathione peroxidase, the ability of PhSeZnCl on reducing peroxides in the presence of a thiol as cofactor was evaluated. We demonstrated an interesting GPx-like activity that is now under confirmation by in vitro cell tests. (*Tetrahedron Letters* **2012**, *53*, 232-234)

Similarly, zinc thiolates can be preparer and used in on water conditions as well as in solvent free conditions. (*J. Sulf. Chem.* **2013**)

- **Bioinspired catalytic oxidations:** Catalysis is one of the most relevant aspect that we **recently** investigated also in combination with the use of environmentally benign solvents paying attention on the reduction of the waste production, without compromising the yields and the chemio- regio- and stereoselectivity of the reactions. We first highlighted that selenium catalyst could be considered convenient reagents for new eco-friendly reactions. (*Angew. Chem. Int. Ed.* **2009**, *48*, 8409). Using water or aqueous reaction media we demonstrated that diphenyl diselenide catalyze the oxidation of double and triple bonds mediated by persulfate affording respectively vicinal diols and 1,2 dicarbonyl derivatives. (*Phosphorus, Sulfur and Silicon & the Related Elements* **2008**, *183*, 956 and *Synlett* **2010** , 1402-1406). More interestingly using as

stoichiometric oxidant aqueous hydrogen peroxide, diphenyl diselenide promote the direct stereoselective dihydroxylation of olefins through the formation of a non isolable epoxide intermediate (*Adv Synth Cat*, **2008**, 350, 288) and when the pre-catalyst is the selenocystine the 1,2- diols of methyl cyclohexene has been obtained in 86% of ee. We also demonstrated that the reaction medium containing the water soluble catalyst, can be reused several time after the extraction of the products (*Tetrahedron* **2012**, 68, 10530). A procedure similar to those used for the synthesis of diols was envisioned in an intramolecular version starting from alkenols and alkenoic acids obtaining respectively hydroxyl-tetrahydrofuranes and hydroxyl-lactones as versatile intermediate for the synthesis of bioactive compounds. (*unpublished results*) The same oxidizing machinery has been applied successfully to the click-synthesis of oxaziridines from primary amines and ketones or aldehydes (*manuscript submitted to Angewandte Chemie*) and to the fast oxidation of aldehydes to carboxylic acids and esters using a stoichiometric amount of peroxide.

- **Synthesis of new biologically active organoselenium derivatives.** Increasing evidence suggests a correlation between oxidative stress and HIV pathogenicity, indeed reactive oxygen species could enhance viral replication and infectivity while the virus itself, with its high rate of replication, could yield oxidative stress shattering host structures and destroying host cells. Compounds containing a selenium-selenium bound are among the most efficacious antioxidants mimicking the activity of the key antioxidant enzyme glutathione peroxidase. A series of variously decorated diselenides inspired to the structures of the known viral nucleocapsid protein NCp7 inhibitors, 2,2-dithiobisbenzamides (DIBAs) were synthesized and their antiviral demonstrated an interesting anti-HIV activity.

Future research plans will be directed to:

- **The development of more efficient catalysts for the use in “flow” conditions.** The introduction of general systems to perform reactions under continuous flow rather than in batch mode has led to improvements regarding safety and sustainability Selenium Heterogeneous catalysts based on zirconium phosphonates will be synthesized and used in flow conditions for the oxidation of different substrates. The same catalysts will be also grafted on zirconia surface in order to obtain a chip-based microreactor suitable in terms of processing time reduction and potential for manufacturing scale-out
- **Role of Selenium and Selenoproteins in vascular disorders and of repair.** It has recently been shown that some small molecular weight selenium compounds can accelerate wound healing in diabetic mice. Although this discovery has important implications for conditions such as peripheral vascular disorders and the treatment of diabetic ulcers, the role of the selenium in the biological repair mechanism is still unexplored and cannot be simply explained on the basis of their in vitro antioxidant capacity. Endothelial nitric oxide synthase (eNOS), and matrix metalloproteinases are implicated in vascular function and wound healing. The role of selenium will be investigated in relation to its regulation of the redox equilibrium and signaling as well as in relation to its possible interaction with zinc centers in the proteins. Ab initio calculations and molecular

	<p>simulation will drive the selection of prototypal small organoselenium derivatives and selenopeptides as NO scavengers and/or eNOS inhibitors. In vivo wound healing assays and in vitro pharmacological/cellular analysis of vascular function and antioxidant activity will provide relevant information concerning the molecular origin of vascular disorders and of repair</p>

ACADEMIC THEACING	
2001 - present	Professor of " Physical Methods for Organic Chemistry " 72hr/year (9CFU) at the school of Medicinal Chemistry LM-13 - MASTER'S DEGREE IN PHARMACY AND INDUSTRIAL PHARMACY - University of Perugia
2014 - present	Professor of " Organic Chemistry in Natural Compounds " 42hr/year (6CFU) at the school of Pharmacy LM-13 - MASTER'S DEGREE IN PHARMACY AND INDUSTRIAL PHARMACY - University of Perugia
2003 - 2011	Professor of " Spectroscopic Methods for Biomolecules " 32hr/year (4CFU) LM-9 - MASTER'S DEGREE IN MEDICAL, VETERINARY AND PHARMACEUTICAL BIOTECHNOLOGIES University of Perugia
2006 - 2010	Professor of " Advanced Spectroscopic Methods " 24hr/year (3CFU) LM-9 - MASTER'S DEGREE IN MEDICAL, VETERINARY AND PHARMACEUTICAL BIOTECHNOLOGIES University of Perugia
2006 - present	Professor of " NMR for Organic Structures Elucidation " PhD course of Medicinal Chemistry, University of Perugia
1996 - 2001	Assistant of " Physical Methods for Organic Chemistry " ; " Organic Chemistry 1 " and " Organic Chemistry 2 "
	<p>Additional Information about the courses of</p> <p>"Physical Methods for Organic Chemistry"</p> <p>The course aims at deepening of the most important instrumental methods that allow to obtain information on the structural characteristics and physico-chemical properties of organic molecules. The processing of the data thus obtained will enable the student to improve skills in the synthesis, development, production and analysis of organic substances with potential pharmaceutical interest.</p> <p><u>Main Topics</u>: Introduction to spectroscopic methods. The electromagnetic spectrum. IR spectroscopy. Mass spectroscopy. 1H NMR spectroscopy. 13C NMR Spectroscopy Introduction to spectroscopy, 31P, 19F. Overhauser Effect: 2D-NMR spectroscopy. Exercises and spectral interpretation.</p> <p><u>The textbook</u> used for the course is :</p> <p>Claudio Santi " Metodi Fisici in Chimica Organica" Boock Open Source - free download from the web (http://www.metodifisici.net/Students%20Area.html)</p> <p>"Spectroscopic Methods for Biomolecules" and "Advanced Spectroscopic Methods"</p> <p>The courses aims at deepening of the most important instrumental methods that allow to obtain information on the structural characteristics and physico-chemical properties of organic molecules, macromolecules and materials.</p> <p><u>First module</u>: Introduction to spectroscopic methods. The electromagnetic spectrum. IR spectroscopy. 1H NMR spectroscopy. 13C NMR Spectroscopy Introduction to</p>

spectroscopy, 31P, 19F

Second module Mass spectroscopy. Overhauser Effect, 2D-NMR spectroscopy
Metabolomics and NMRI

“Organic Chemistry of Natural Compounds”

The course focus on the importance of natural substances. Primary and secondary metabolites, the study of metabolism. Major biosynthetic pathways (via shikimic acid, mevalonate, the deossixilulosio phosphate). Methods of extraction and recognition of the major classes of metabolites. Phenolic compounds (anthraquinone, phenylpropanoids), terpenoids (mono - of - sesqui-, triterpenes, sterols and steroids, tetraterpenes and carotenoids), alkaloids.

Evaluation of the course by the students (x.x/10.0)

Academic Year	Physical Methods for Organic Chemistry		“Spectroscopic Methods for Biomolecules” and “Advanced Spectroscopic Methods”	
	Average of the course (Santi, C.)	Average of all the courses of the Master Degree	Average of the course (Santi, C.)	Average of all the courses of the Master Degree
2012-13	7.4	7.4	--	--
2011-12	8.6	8.2	8.6	7.4
2010-11	8.6	8.1	8.5	7.8
2009-10	8.8	7.5	8.5	7.5
2008-09	8.7	7.9	9.1	7.6
2007-08	8.7	7.7	8.9	7.5

List of Supervised (or assisted) PhD Thesis

1. **Dr. Cristina Tomassini** “Diastereo- and Entioselective functionalization of Organic Organic Molecules” (2006) (as lab-assistant)
2. **Dr. Stefano Santoro** “Novel Diastereo- and Entioselective Synthesis of polyfunctionalized Organic Molecules” (2008) (co-advisor with Prof. Tiecco)
3. **Dr. Benedetta Battistelli** “New Organoselenium reagents in Green Chemistry” (2012)
4. **Mrs. Caterina Tidei** “New Catalytic processes for eco-friendly conversions” (2015)
5. **Mr. Juliano Brown de Azeredo** (co-advisor with prof. Luis Antonio Braga Universidade Federal Santa Catarina BS) “PhD Sandwiches program” (2013-14)
6. **Mrs. Vanessa Nascimento** (co-advisor with prof. Luis Antonio Braga Universidade Federal Santa Catarina BS) “PhD Sandwiches program” (2013-14)
7. **Mrs. Jaqueline Vargas** (co-advisor with prof. Diogo Ludtke Universidade Federal Rio Grande do Sul BS) “PhD Sandwiches program” (2014-15)

Perugia 2nd May 2014, Prof. Claudio Santi

A handwritten signature in black ink, appearing to read 'Claudio Santi', written in a cursive style with a long horizontal stroke at the end.
